BRICKCESSORIES

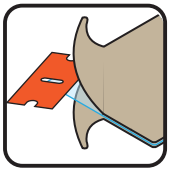

Display Case Assembly Instructions

Thank you for purchasing an official Brickcessories display case! Please see our tips on the reverse side for more information on getting the best results from our product.

Our LDC158 case includes the following pieces:
1x Base, 28x Screws, 12x Screw Cubes, 2x Short Side Panels, 2x Long Side Panels, 1x Top Panel, 1x Scraper

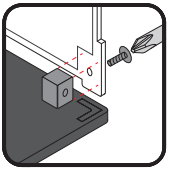

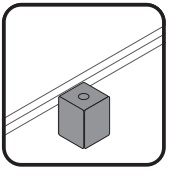

WARNING: Be careful around the edges of the acrylic as they may be sharp.

1. Use scraper to peel protective layer off acrylic pieces before assembly. Protective coating may be cloudy/opaque.

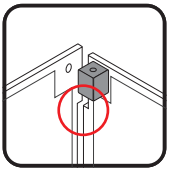

2. Insert one side panel into base plate. Use a phillips head screwdriver to attach cubes to side panel. **Do not overtighten** to avoid damaging the panels. Note the hole positions on the cubes.

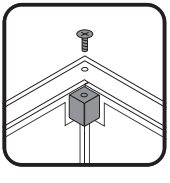

3. On the side panels, an extra support cube is used. These cubes only use 2 screws.

4. Repeat with the following side panels. The side panels have distinct sides to them via a notch and tab.

5. Place top panel onto the completed side panels and screw in the top panel.

6. You can now lift up the top and sides of the case and place your set inside.

Assembly and Usage Tips

General Build Tip
If any component feels too loose or tight during assembly, try flipping it. If this does not help:

For loose connections
you can apply a small piece of invisible tape around the affected stand. You may also try using glue to secure the part. (Please read the usage tips before you try this.)

For tight connections
use a small file to reduce the tension on the affected parts for too-tight connections.

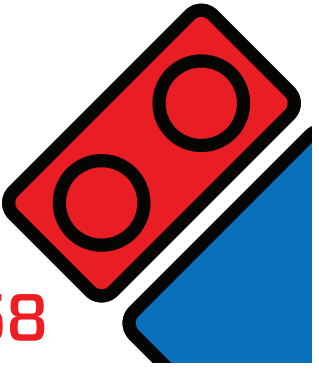

Gluing
WARNING: IMPROPER USE OF GLUE MAY DAMAGE THE ACRYLIC. Glue is not required to assemble our stand. But if you'd like a more permanent, stronger stand, you may use glue. We recommend an acrylic bonding cement designed to glue acrylic. While it is possible to use super glue (Methyl 2-cyanoacrylate), it can discolor and damage the acrylic if not used carefully.

Dusting and cleaning your stand
Use a clean microfiber cloth to gently remove dust or fingerprints from your stand. Do not use paper towels as they may scratch the surface. Most household cleaners may harm the finish. Be sure any cleaner used is safe for acrylics, and test it first on the underside of a base piece.

Need further assistance?
If you need help with your kit, order, or general questions, please contact us at **contact@brickcessories.com**.

Thank you again for your purchase.
We look forward to seeing your kits on display.
